- **Lighting Facts™ Starts Accredited List of Testing Labs**

Lighting Facts™, a program of the US DOE, has issued new guidelines and now requires approved NVLAP testing labs for LM-79 reports. Starting on June 1, Lighting Facts will accept LM reports only from the testing labs on its approved list. Aleddra currently uses [Independent Testing Laboratories](#) in Boulder, CO (an approved facility).

Aleddra fully supports Lighting Facts List as we feel it is important that the LED users have clear, concise reports that they can evaluate a product's performance for their project. It is Aleddra's position to support any and all industry standards that provide a more accurate representation of all LED products found at www.LightingFacts.com, to encourage proper growth for the LED lighting segment. For the current list of Lighting Facts approved labs, [click here](#).

- **Aleddra US Agent Locator Goes Live**

Visit our [agent locator page](#) and click your state on the US map to see your local agents. If you are interested in becoming our US/Canada agent, send your request to sales@aleddra.com. For international request, please address to international@aleddra.com.

- **T8 LED Lamp Retrofit Considerations**

A workshop on the subject was given at 30th Energy Management Congress in Seattle. A full copy of the presentation is now available for download at [this link](#).

- **Aleddra Becomes Built Green Member and Sponsor – [Press Release](#)**

2210 Lind Ave. SW, Suite 100, Renton, WA 98057, USA
