Select the Right LED T8 Lamp for Energy Efficiency

70% of existing fluorescent tube fixtures use shunted tombstone and most likely the fixtures in your building are among them. When retrofitting existing fixture with energy saving LED T8 lamps, single-ended LED T8 WON'T WORK with shunted tombstones, whereas the Aleddra double-ended LED T8 can be used in both shunted and non-shunted tombstones. To select the right LED T8 lamp:

- For retrofit of existing fixtures, use UL-1598C classified double-ended LED T8.
- Use single-ended LED T8 with complete fixture upgrade or new construction

Aleddra's double-ended T8 with DSS (Double Safety Switch) saves 50-70% installation time and cost for retrofit project, and its single-ended T8 is ideal for your new fixture. It will showcase its **T8 highbay lighting** at [LightShow East](#), Oct. 3-4 in Washington D.C. and introduce **My Aleddra, My Advantage** program to partners and contractors. To schedule an appointment for the tradeshow, email your request to sales@aleddra.com.

LED is FUN Ice Bucket in LED Style

If your ice bucket is not colorful enough or does not properly reflect your fashionable life style, you would want to check out this cool LED ice bucket. With a remote control, you or your guest can adjust the color to your mood. It lasts 5-8 hours after charging and consumes 1.2W. Detail spec sheet is available [here](#). The manufacture can be reached at sales1@surlinkled.com. Share with us your thought of LED Ice Bucket [on our Facebook](#) 

(Disclaimer: Aleddra has no business affiliation with the manufacturer of LED Ice Bucket.)
